

## 1. Project Overview

Developed an interactive **financial compliance analytics dashboard using Power BI** to analyze money transfer transactions, customer details, transaction patterns, risk levels, KYC status, and compliance-related activities. The project helps identify high-risk transactions, monitor transaction volumes, understand customer behavior, and support better decision-making through interactive data visualization and business insights.

### Project Objective

- To analyze transaction data effectively and identify business trends
- To monitor transaction amounts, transaction volume, and currency-wise performance
- To identify high-risk transactions using risk ratings and compliance indicators
- To analyze KYC status and improve compliance monitoring
- To understand customer demographics such as sender age and country-wise transactions
- To evaluate transaction channels and transaction types performance
- To identify PEP (Politically Exposed Person) related transactions for compliance review
- To provide interactive and meaningful visual insights using Power BI

## 2. Data Sources

### • Source Description and Timeline:

<https://www.kaggle.com/datasets/ealtman2019/ibm-transactions-for-anti-money-laundering-aml>

- **Domain:** FinTech / Global Cross-Border Banking (Compliance & AML Analytics)

## 3. Problem Statement

Analysing historical **financial transaction and compliance data** by cleaning, transforming, and visualizing datasets using **Excel and Power BI** to identify transaction trends, customer behavior, risk patterns, compliance status, currency-wise performance, and suspicious transaction activities.

#### 4. Attribute (Column /Features) Details:

| Attribute Name    | Data Type         | Description                                                                  |
|-------------------|-------------------|------------------------------------------------------------------------------|
| Transaction ID    | String (Text)     | Unique identifier for each transaction                                       |
| MTCN              | Integer/String    | Money Transfer Control Number used to track transactions                     |
| Sender Name       | String (Text)     | Name of the person sending money                                             |
| Receiver Name     | String (Text)     | Name of the person receiving money                                           |
| PEP Related       | String (Text)     | Indicates whether the transaction is related to a Politically Exposed Person |
| Sender Currency   | String (Text)     | Currency used by the sender for transaction                                  |
| Receiver Currency | String (Text)     | Currency received by the receiver                                            |
| KYC Status        | String (Text)     | Customer verification and compliance status                                  |
| Transaction Type  | String (Text)     | Category/type of money transfer transaction                                  |
| Amount            | Integer (Numeric) | Total transaction amount value                                               |
| Channel           | String (Text)     | Mode/channel used for transaction processing                                 |
| Risk Rating       | String (Text)     | Risk level assigned to the transaction                                       |
| Timestamp         | DateTime          | Date and time of transaction occurrence                                      |
| Sender Age        | Integer (Numeric) | Age of the sender                                                            |
| Sender Country    | String (Text)     | Country from where money is transferred                                      |
| Receiver Country  | String (Text)     | Country where money is received                                              |
| Customer Address  | String (Text)     | Address details of the customer                                              |

#### 5. Tools & Technologies

- Excel: Data cleaning, transformation, and Pivot Tables.
- Power BI: Data modelling, DAX calculations, visualization, and interactive dashboard creation.

## 6. Data Pre-Processing (Excel / Power Query)

### Tasks Performed:

Data Cleaning & Transformation: Removed duplicates, handled missing values, standardized formats, Splitting, Find and replace.

### Data Modelling and DAX (Power BI)

#### Data Model:

Established relationships between tables, defined cardinality, and created lookup tables where necessary to analyze transaction and compliance data effectively.

#### Tables Created:

| Table Name            | Purpose                                                                                                                           |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Transaction Table     | Main fact table containing transaction details such as amount, currency, risk rating, KYC status, transaction type, and timestamp |
| Customer Lookup Table | Contains customer-related information such as sender details, sender age, sender country, and customer address                    |
| Country Lookup Table  | Used for analyzing sender and receiver country-wise transaction performance                                                       |
| Currency Lookup Table | Used for currency-based analysis and transaction comparison                                                                       |
| Risk Lookup Table     | Used to categorize and analyze transaction risk levels                                                                            |

#### Relationships:

| Relationship                        | Cardinality       | Purpose                                           |
|-------------------------------------|-------------------|---------------------------------------------------|
| Customer Lookup → Transaction Table | One-to-Many (1:*) | Connect customer details with transaction records |
| Country Lookup → Transaction Table  | One-to-Many (1:*) | Analyze country-wise transaction trends           |
| Currency Lookup → Transaction Table | One-to-Many (1:*) | Analyze currency performance                      |
| Risk Lookup → Transaction Table     | One-to-Many (1:*) | Analyze risk categories                           |

### Calculated Columns & DAX Measures:

Created DAX formulas to calculate key business metrics such as:

| Measure                    | DAX Formula                                                | Purpose                                 |
|----------------------------|------------------------------------------------------------|-----------------------------------------|
| Total Transactions         | Total Transactions =<br>COUNT(Transaction[Transaction ID]) | Calculates total number of transactions |
| Total Transaction Amount   | Total Amount = SUM(Transaction[Amount])                    | Calculates total money transferred      |
| Average Transaction Amount | Average Amount =<br>AVERAGE(Transaction[Amount])           | Finds average transaction value         |
| High Risk                  | High Risk Count =                                          | Identifies high-risk                    |

|                               |                                                                                                                                                             |                                    |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| Transactions                  | CALCULATE(COUNT(Transaction[Transaction ID]), Transaction[Risk Rating]="High")                                                                              | transactions                       |
| KYC Approved Transactions     | KYC Approved =<br>CALCULATE(COUNT(Transaction[Transaction ID]), Transaction[KYC Status]="Approved")                                                         | Measures verified transactions     |
| PEP Related Transactions      | PEP Count =<br>CALCULATE(COUNT(Transaction[Transaction ID]), Transaction[PEP Related]="Yes")                                                                | Tracks PEP-related activities      |
| Average Sender Age            | Avg Sender Age =<br>AVERAGE(Transaction[Sender Age])                                                                                                        | Calculates average customer age    |
| Online Transactions           | Online Count =<br>CALCULATE(COUNT(Transaction[Transaction ID]), Transaction[Channel]="Online")                                                              | Measures online transaction volume |
| Cumulative Transaction Amount | Running Total =<br>CALCULATE(SUM(Transaction[Amount]),<br>FILTER(ALL(Transaction[Timestamp]),<br>Transaction[Timestamp] <=<br>MAX(Transaction[Timestamp]))) | Shows transaction growth over time |

SCREENSHOT OF DASHBOARD /REPO

## Insights & Conclusions

### Key Findings:

#### Descriptive Analysis:

- A total of **1165 transaction records** were analysed successfully to understand transaction behaviour, compliance status, and risk patterns.
- The total transaction value processed was approximately **8.72 million**, with an average transaction amount of around **7,487**.
- **Web Portal** was identified as the most commonly used transaction channel, followed by ATM and Agent Network.
- Transactions were distributed across different transaction types, with **Inter-transaction and External transactions** showing higher transaction volumes.
- The average sender age was approximately **51 years**, indicating that transactions were mainly performed by middle-aged customers.
- **Low-risk transactions** were the highest category, followed closely by Medium, Critical, and High-risk transactions, showing the presence of varied compliance risk levels.
- KYC analysis showed that customer verification statuses were distributed across **Pending, KYC, Non-KYC, Unverified, and Verified** categories, highlighting the need for continuous compliance monitoring.
- Most transactions were **not related to PEP (Politically Exposed Persons)**, while a smaller portion of transactions were flagged as PEP-related and require additional monitoring.
- The highest number of sender transactions originated from countries such as **UK, Brazil, Germany, India, and UAE**.
- Receiver transactions were mainly associated with countries including **South Africa, Canada, Germany, UAE, and Brazil**.
- Transaction patterns indicate a global money transfer network with multiple currencies, countries, channels, and risk categories involved.

#### Compliance Insights:

- High and Critical risk transactions require additional investigation and enhanced due diligence.
- Missing or pending KYC records indicate opportunities to improve customer verification processes.
- PEP-related transactions should be monitored closely to reduce financial compliance risks.
- Channel-wise analysis helps identify customer preferences and supports fraud detection strategies.

#### Conclusion:

The analysis provides a clear understanding of transaction volume, customer behaviour, risk distribution, and compliance factors. The insights can help financial institutions improve **KYC management, risk assessment, fraud monitoring, and regulatory compliance processes**.

## ▪ **Diagnosis**

- Departments with specialized treatments and higher patient inflow generated higher revenue.
- Emergency admissions increased due to critical patient conditions requiring immediate treatment.
- Longer hospital stays contributed to higher billing amounts and resource utilization.
- Lower satisfaction ratings in some departments may be due to:
  - Longer waiting times
  - High treatment costs
  - Extended stay duration
- Insurance payments were higher because many patients preferred cashless treatment facilities.

## ▪ **Predictive**

- Departments with consistently high patient admissions are expected to experience increased resource demand in the future.
- Emergency admissions may continue to rise, requiring improved hospital preparedness.
- Treatment costs are likely to increase if patient stay durations continue to grow.
- Departments with lower satisfaction ratings may experience reduced patient retention if service quality is not improved.
- Insurance-based payments are expected to dominate future hospital transactions.

## ▪ **Prescriptive**

- Increase resource allocation and staff support in high-performing departments.

- Improve emergency response systems to manage increasing emergency admissions efficiently.
- Reduce patient waiting times and optimize treatment processes to improve satisfaction levels.
- Monitor patients with long stay durations to reduce unnecessary resource utilization.
- Enhance patient care quality and communication for better patient experience.
- Implement data-driven monitoring systems to support hospital decision-making and operational efficiency.

## **8. Conclusions**

This project successfully analysed hospital patient and treatment data using Power BI to understand hospital operations, treatment costs, patient satisfaction, and department performance.

The dashboard provided meaningful insights into:

- Revenue generation
- Patient admission patterns
- Payment methods
- Resource utilization
- Patient care quality

Through interactive visualizations and data analysis techniques, the project demonstrated how healthcare organizations can use business intelligence tools to improve operational efficiency, optimize hospital resources, and support better decision-making.

The project also highlighted the importance of healthcare analytics in identifying trends, improving patient services, and enhancing overall hospital performance.
